

ARIA Systems — Annual Report 2024

Executive Summary

ARIA Systems had a strong fiscal year 2024, with total revenue growing by 22% year-over-year to \$2.06 million. The Data Science division led growth with a 42% increase in revenue. The company expanded its AI product offerings and onboarded 15 new enterprise clients.

Financial Highlights

Department	Q1 Revenue	Q4 Revenue	Annual Growth
Data Science	\$450,000	\$700,000	55.6%
Engineering	\$380,000	\$560,000	47.4%
HR	\$210,000	\$290,000	38.1%
Total	\$1,040,000	\$1,550,000	49.0%

AI Strategy & Roadmap

In 2024, ARIA Systems invested heavily in Generative AI capabilities. Key initiatives included deploying RAG-based knowledge assistants for enterprise clients, building LangGraph-powered agentic workflows, and integrating vector databases for semantic search. The company plans to expand its LLMOps capabilities in 2025 with automated evaluation pipelines using RAGAS.

Risk Factors

The company faces risks including rapid changes in AI technology landscape, increasing competition from large cloud providers, and regulatory uncertainties around AI governance and data privacy. ARIA Systems has implemented guardrails and content safety measures to mitigate AI-related risks.
